

First Pass Analysis From Delib

AI-powered consultation analysis.

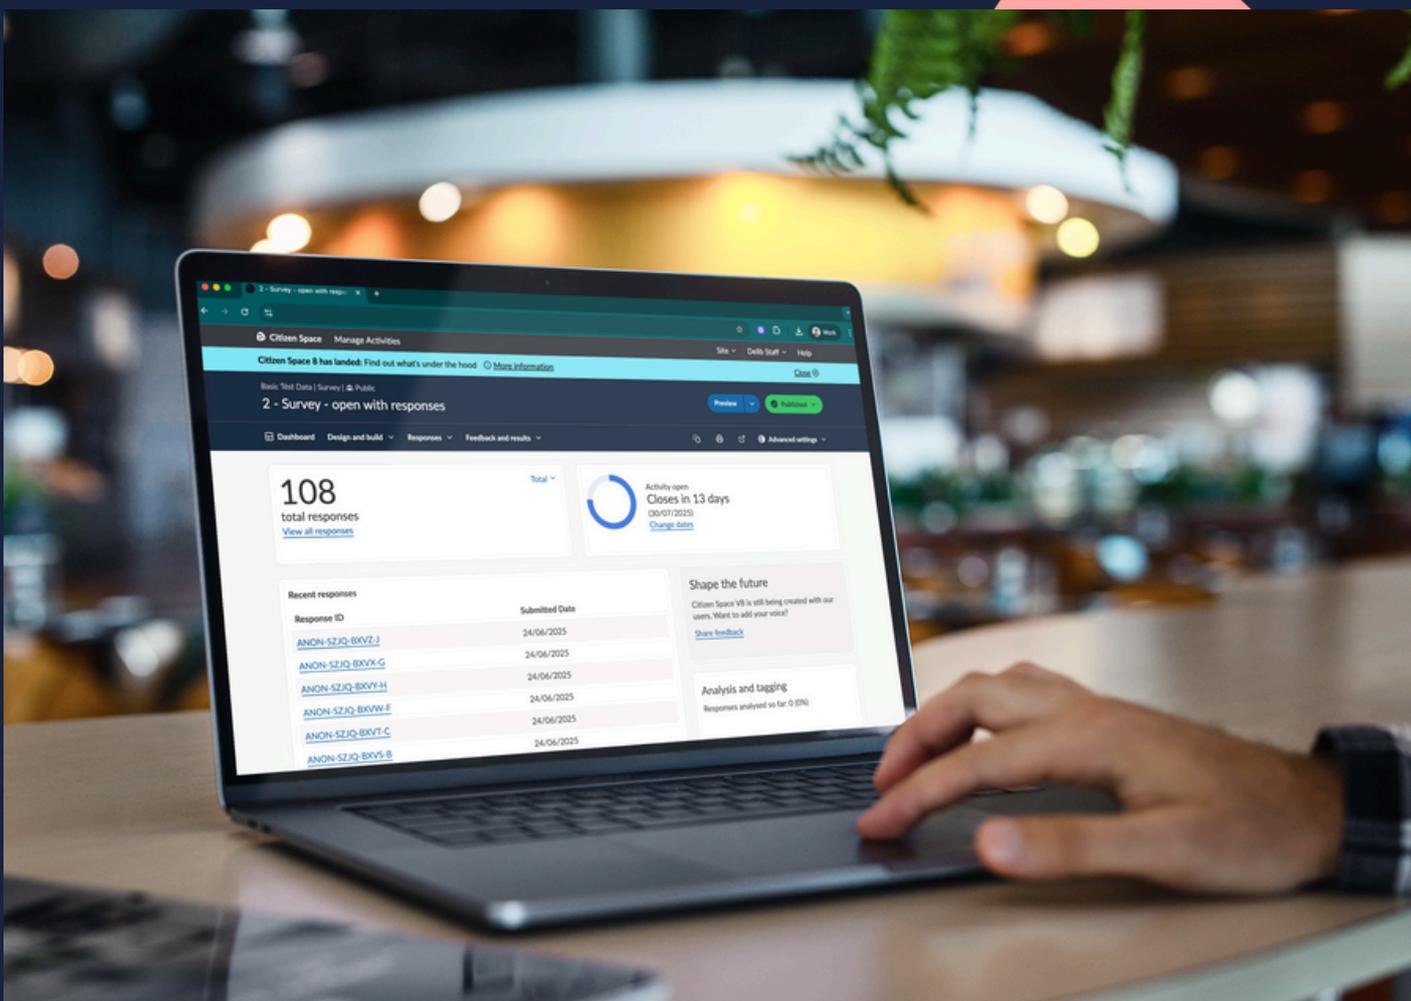

Designed to reduce workload, speed up workflows and enhance human capabilities.

Transform consultation analysis with intelligent automation

First Pass Analysis is an AI-powered service that works seamlessly with Citizen Space to accelerate your consultation analysis workflow. Using advanced language models, it provides automated sentiment analysis, keyword identification, and response summaries, giving your team a head start on understanding what respondents are saying.

Designed specifically for government consultation processes, First Pass doesn't replace human analysis. Instead, it acts as your consultation copilot, handling the initial review so your analysts can focus on deeper insights and decision-making. Every AI-generated finding can be edited and refined by your team, keeping humans firmly in the loop.

First Pass Analysis Overview

The smart, secure and responsible way to analyse large data sets

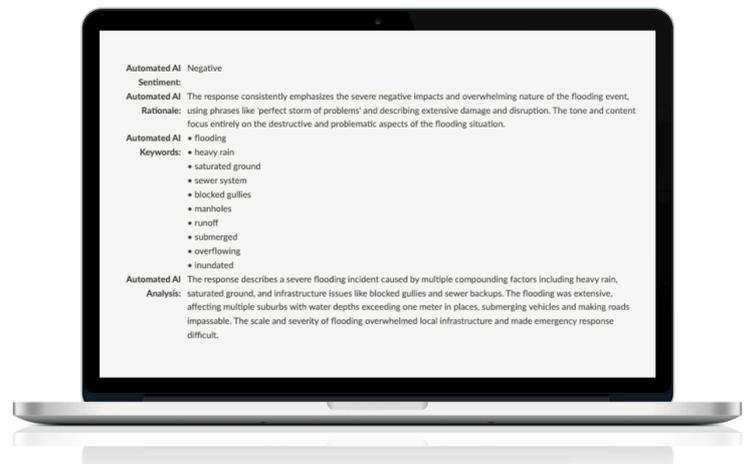

First Pass Analysis integrates directly into Citizen Space as a saved question, automatically processing responses as they arrive and feeding insights back to your analyst dashboard.

Key benefits:

- Faster initial analysis of consultation responses
- Automated sentiment detection and keyword tagging
- Response summaries generated instantly
- Objectionable content flagging for response publishing
- Fully editable AI outputs maintaining human oversight
- Subscription-based pricing per site

AI assistance.
Human-led decision making.

Designed with expert override at its core, First Pass provides the initial review whilst your analysts make all final decisions.

When a response is submitted, First Pass automatically analyses it using context from your consultation overview, questions, and components to deliver relevant insights.

It identifies key themes and keywords, creates response summaries, and flags objectionable content, all within seconds of submission.

All AI-generated findings appear in analyst-only fields that your team can edit, refine, or override, ensuring accuracy and preserving the original response data.

How it all works

First Pass Analysis integrates directly into Citizen Space as a saved question, automatically processing responses as they arrive and feeding insights back to your analyst dashboard.

Context-aware AI

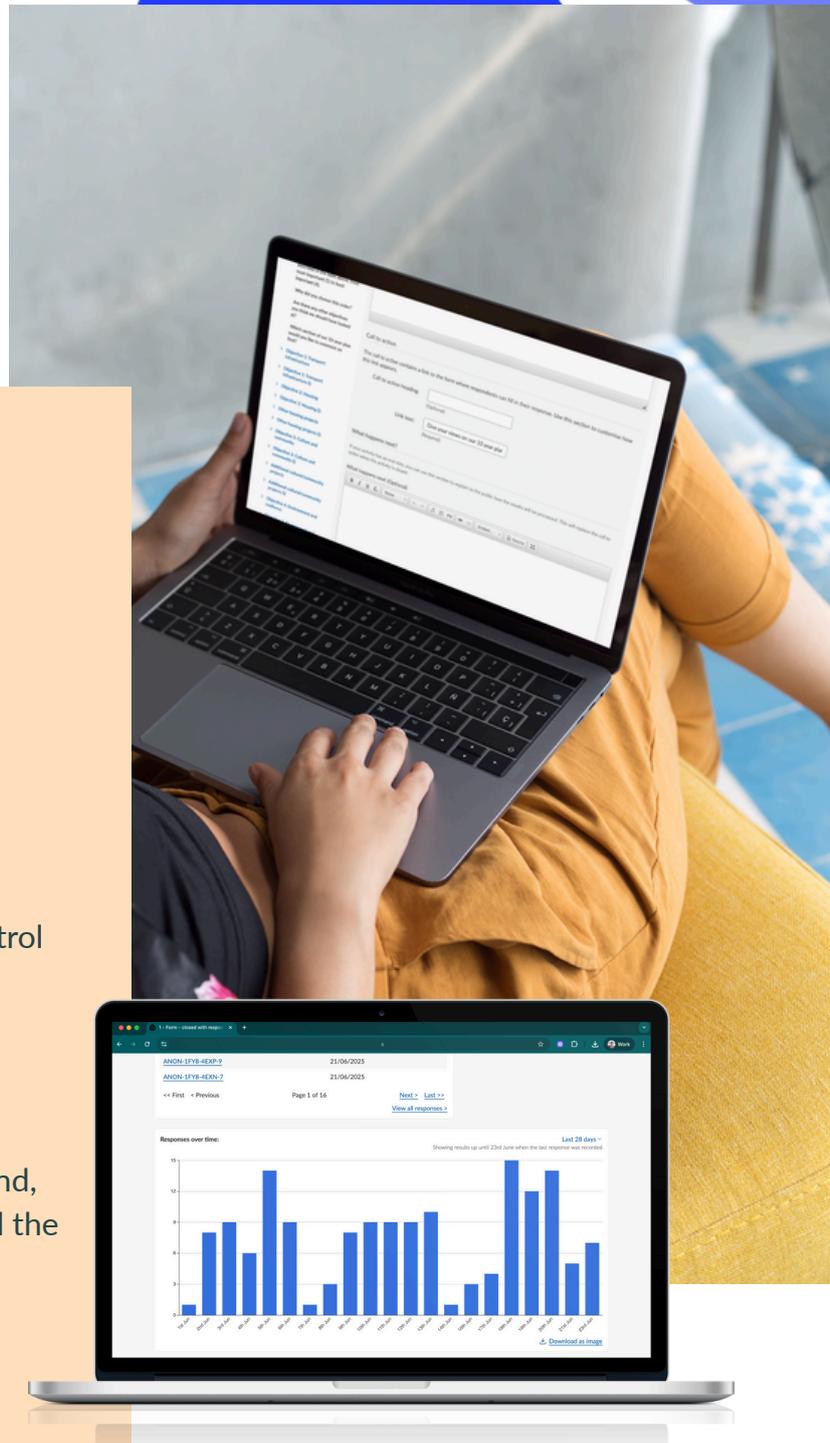

Unlike tools that analyse bulk data without context, First Pass examines each response individually whilst understanding your consultation's specific questions and objectives.

Safe and transparent

Runs in parallel to Citizen Space with clear circuit breaks. Your team maintains full control over findings, and all data stays within your secure environment.

Built for government

Built with public sector requirements in mind, including data sovereignty, auditability, and the ability to customise analysis parameters to match your processes.

The role of AI in your analysis

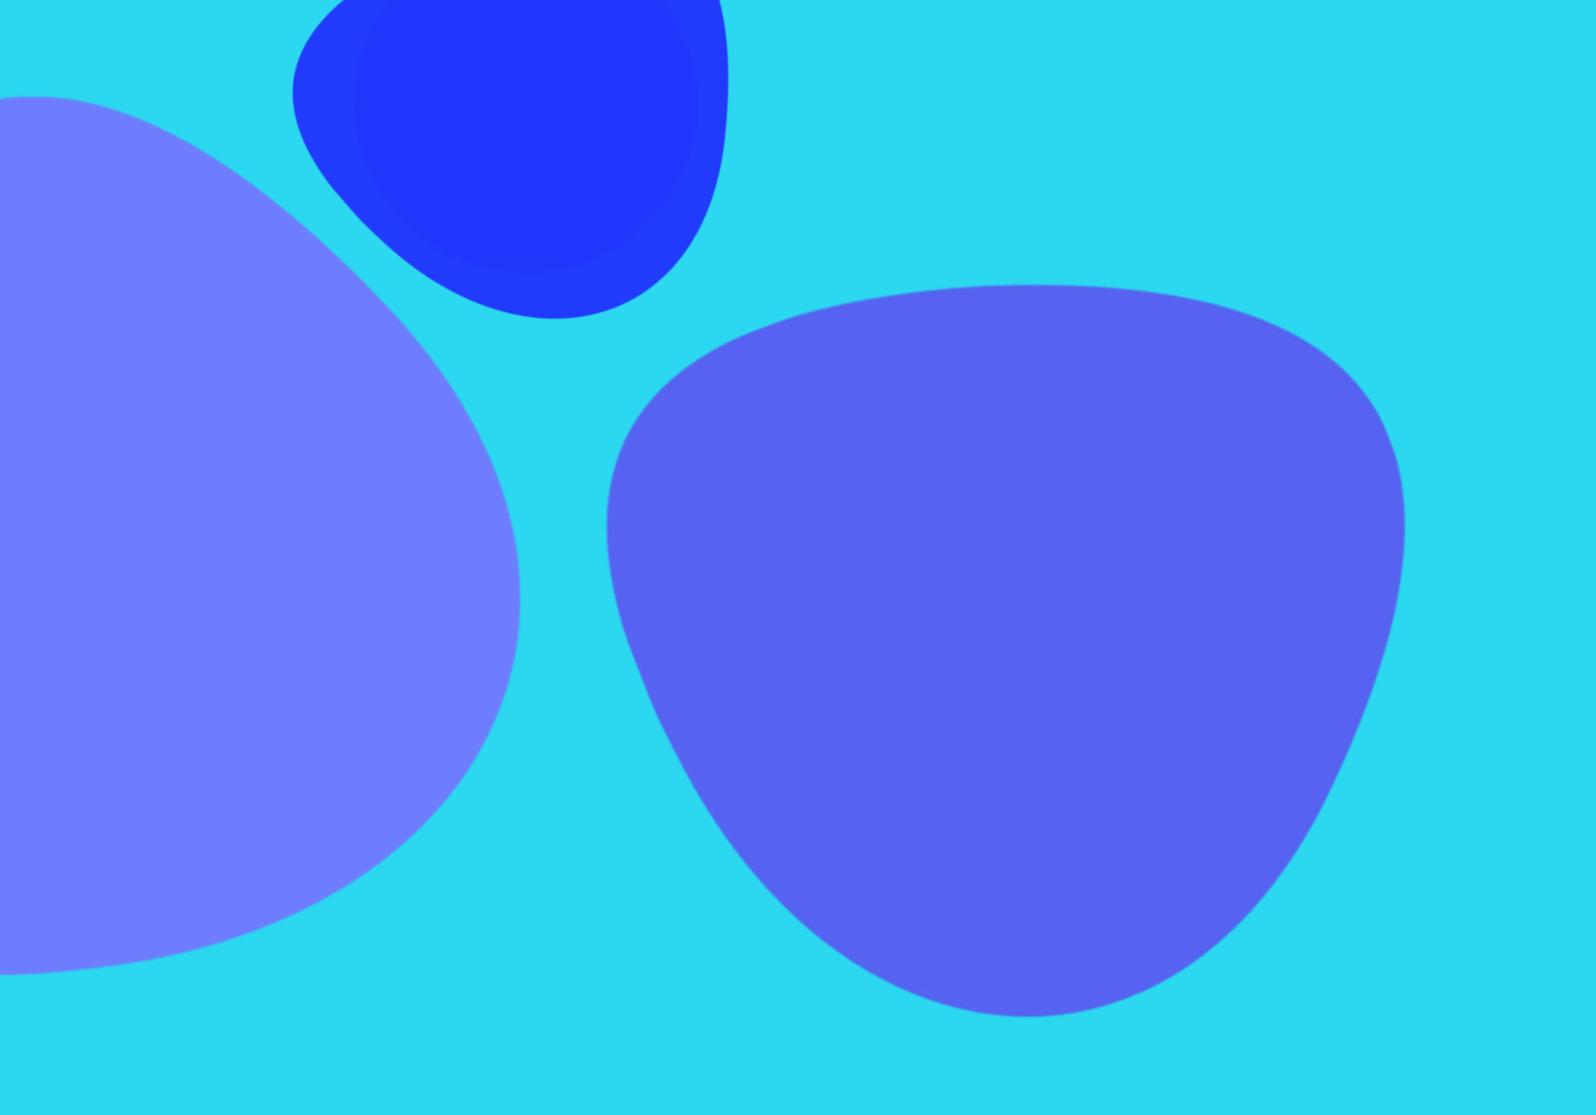

First Pass Analysis is exactly what the name suggests - a first pass. It handles the initial review so your analysts can focus on verification, interpretation, and the nuanced judgement that only humans can provide. **The AI assists; your team decides.**

What First Pass Analysis does

- ✓ Provides automated initial analysis of every response
- ✓ Generates sentiment scores and keyword tags
- ✓ Creates response summaries highlighting main points
- ✓ Identifies objectionable content for moderation
- ✓ Speeds up your analysis workflow
- ✓ Maintains all findings in editable, exportable format

What it doesn't do

- ✗ Replace human analysts or decision-making
- ✗ Make final determinations about response meaning
- ✗ Modify original response data
- ✗ Remove the need for human review
- ✗ Guarantee 100% accuracy on all responses
- ✗ Make consultation decisions on your behalf
